

Greetings!!!

We are pleased to present the March *Sting* Tip of the Month. We send the tip via email, but will also highlight it on the website (www.dakcs.com). We ask our support team for ideas that may be helpful. We hope you find it beneficial!

Setting up a BLIND allows you to type one word and have it take you to the options you want in a few key strokes. If you can't determine what the program is that you need to enter at the question, "Enter A Program To Execute", call us and we'll find the name for you to enter. The following is an example to take you to the trust menu.

At the MAIN MENU

Type: BLIND

Do you want to continue? (Y/N) -> Y

(A)dd, (D)elete, (C)opy, (Q)uit, (N)ext Page ->

Choose A to add

Enter A Name For The Blind ->

TRUST

Enter A Program To Execute -> 10/COLLTRUSTPULL

Screen immediately pops back to menu.

Type TRUST. It will take you to options 8, 1, 2

WORK is an example of a BLIND that is on all systems. This blind takes you to 4, 6. You can follow the prompts to see if your pull did run last night or see an overview of collector queues. You can also choose the option to check tables and see what one collector has in each line of his/her pull table.

If you have any ideas or tips that might be worth sharing, please contact me directly at 617 846 0454. I would love to hear from you!

Deb Kilroy
